

## Inventory Search

Want to search your inventory for all stock, regardless of size or quality? A simple search page is included to locate all plants by name.

## Incoming Inventory

As inventory comes in, a simple to use entry page is provided to enter a full description of that inventory into your database. Location, name, size and grade are all entered from this page.

## We Want to Hear From You!

Tree Logic is dedicated to providing the nursery/grower's industry with an easy to use, cost effective solution to your inventory management needs.

We have worked for over a year with a highly respected partner in this industry to develop **GeMS**. Ensuring that **GeMS** is simple to use and cost effective has been a priority.

However, to ensure that it is robust enough to meet all of your needs, we need to hear from you!

If there is anything that you need this program to do for you that is not in our software currently, or you have ideas to help us improve the functionality of **GeMS**, please contact us and let us know your thoughts.

**Your business is greatly appreciated!**

## Grower's Management Solution

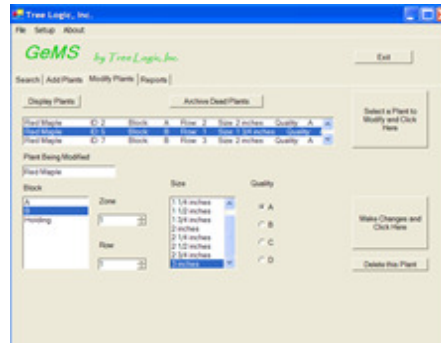

Finally, an affordable solution for tracking field inventory for the smaller nursery/grower!

GeMS was developed due to requests from small field farms to allow them the opportunity to track and maintain their crop's inventory and location over a period of growing years.

This simple to use software allows you to set up your fields in blocks and rows, record the plant's position by block and row, and set up both common and scientific names for the plants. As time goes by, you can easily modify each plant by size and quality. If you need to change positions of the plants in your fields, again, simply modify their block and row position with your software.

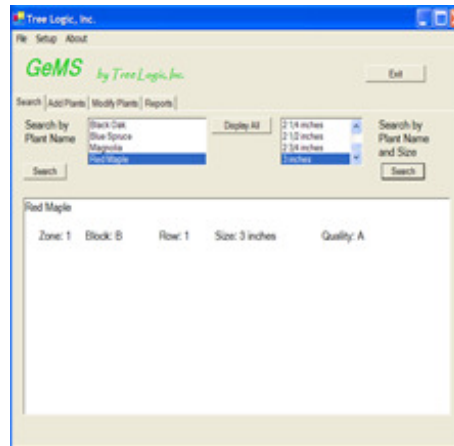

## Modifications

Need to modify your inventory as it grows? A simple screen allows you to modify size, quality, block and row...you can even track dead-loss!

## Easy Search Options

Need to do a quick search to make sure you can fill an order? Quick, and easy to use search by plant name, or plant and size.

## Upgrades

Tree Logic will be developing a variety of upgrades, based on your feedback, to enhance your GeMS package. GeMS was designed to be affordable to everyone and not to make you pay for components that you may not need. However, should you need cost accounting, point-of-sale, reporting, brochure building, or drop-down plant name lists to minimize manual entry, we will provide these add-ons based on demand.

These will be low-cost modules that you can add over time to boost your program while maintaining a high ROI.

We are committed to providing your industry with all the tools you need to be successful, without charging you for what you don't need.

Custom modification is also available on an individual basis.
